DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "valves" (claims 14 & 23), the "slot" (claim 17), and the channel in the end plate (claim 24) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 14 and 18 is objected to because of the following informalities: Claim 14, Line 7, "accommodating" should be --accommodating--; Claim 18, Line 2, "inner ring" should be --an inner bearing ring--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 14-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 recites "connecting channels" in line 4, while claim 16 recites "a channel" it is not clear whether the "channel" is included in or separate from the "connecting channels".

Claim 14 recites "displacement means" in line 4, while claim 20 recites "at least one pump piston", which appears to be directed to the same element.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is

Art Unit: 3745

(a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required

feature of the claims. Note also, for example, the decisions of Ex parte Steigewald, 131

USPQ 74 (Bd. App. 1961); Ex parte Hall, 83 USPQ 38 (Bd. App. 1948); and Ex parte Hasche,

86 USPQ 481 (Bd. App. 1949). In the present instance, claim 15 recites the broad recitation

"pressure fluid", and the claim also recites "particularly leakage pressure fluid" which is the

narrower statement of the range/limitation.

Claims 17-19, 21, and 22 are rejected due to their dependence from claim 14.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

A person shall be entitled to a patent unless -

basis for the rejections under this section made in this Office action:

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-17, 21, and 22 are rejected under 35 U.S.C. 102(a) as being anticipated by Schmitt et al (DE 10023947).

Schmitt et al discloses a motor-pump unit having a motor and a pump which is provided with a shaft (24) that is driven by the motor, with the shaft end being rotatably mounted by means of at least one bearing (38) in an accommodating member (14), the shaft driving displacement means (34) which are disposed at least in part in a chamber (~22) that is filled with pressure fluid and the chamber surrounding at least a part of the bearing, and with the shaft end terminating into a free space (~50) within the accommodating member, wherein the bearing

separates the chamber from the free space, and wherein a connection is provided between the chamber and the free space. Wherein the free space and the chamber are designed to receive pressure fluid, a channel (not shown) is provided between a pressure fluid supply tank and the chamber so that the free space is connected to the pressure fluid supply tank, and the bearing is configured as a movable bearing, and wherein the connection between free space and chamber takes place by way of a slot between an inner bearing ring and a bearing seat of the shaft. The bearing is arranged in a stepped through-hole of the accommodating member, wherein the bearing adjoins the free space, and the through-hole is provided with a closure means designed as a cover that abuts on a bore step, and in that the cover is calked with the accommodating member (Fig. 2).

Claims 23 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Schneider (DE 19927658).

Schneider discloses a motor-pump unit having a motor and a pump which is provided with a shaft (20, 32) that is driven by the motor, with the shaft end being rotatably mounted by at least one bearing (28) in an accommodating member (16), the shaft driving displacement means (27) reaching into a crank chamber (not labeled), and the bearing is provided in front of an end plate (not labeled) of the motor between the crank chamber and the end plate, wherein at least one channel (not labeled) is connecting a side of the bearing remote from the crank chamber with a leakage discharge channel for the crank chamber. Wherein the channel is provided in the end plate.

Allowable Subject Matter

Claims 18-20 and 25-26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents 6478554, 5839349, and 5742109 each disclose motor-pump units.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Leslie whose telephone number is (571) 272-4819. The examiner can normally be reached on M-F 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look can be reached on (571) 272-4820. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
